# Computer Assisted Surgery

**RoboDoc: Hip replacement assistant**  
(accurate bone drilling)

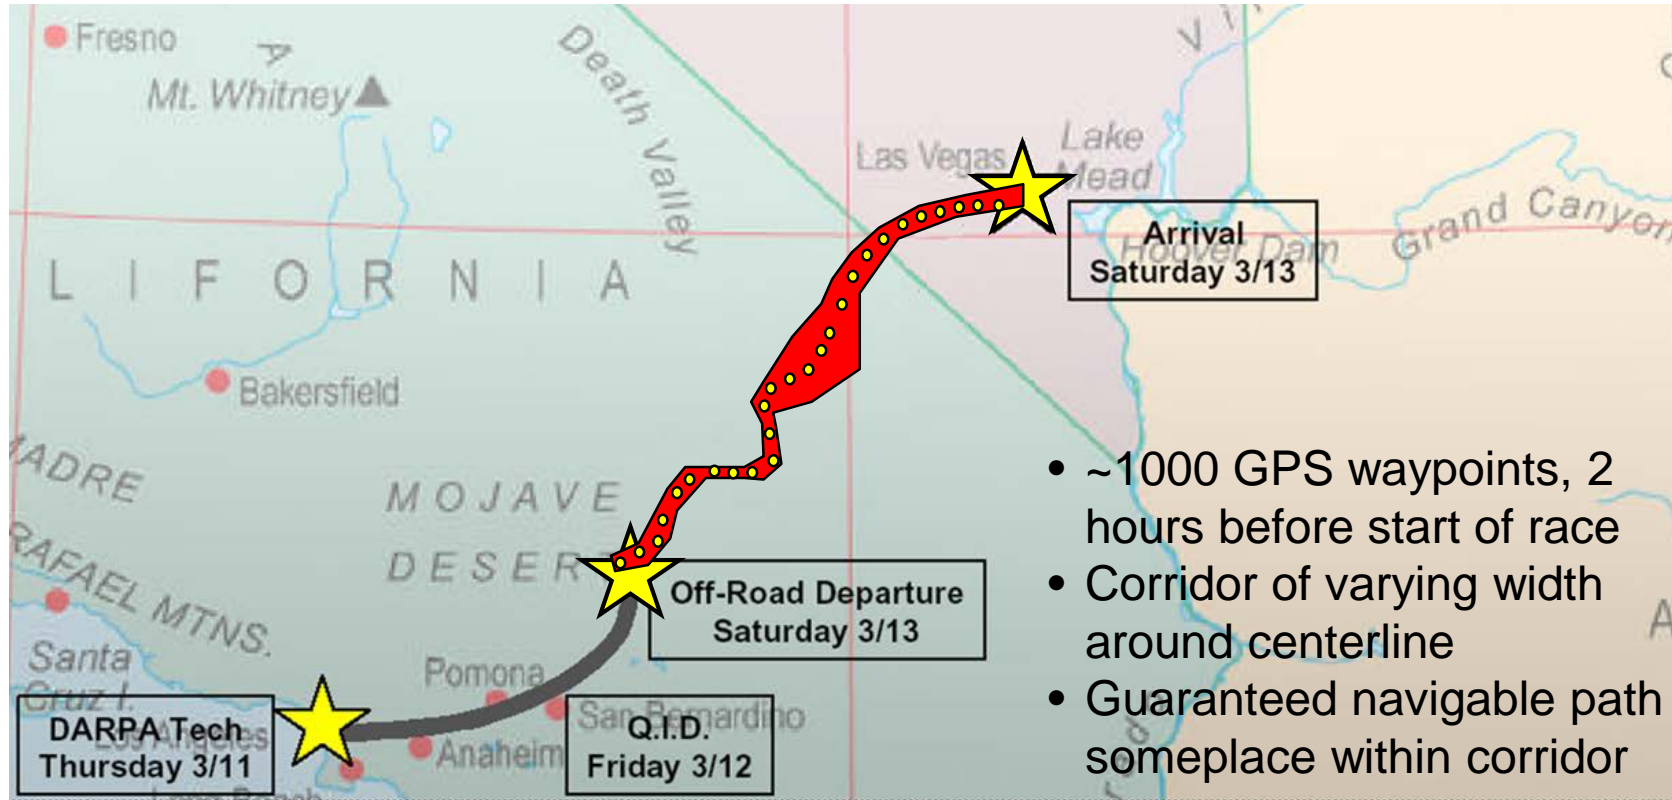

**Intuitive Surgical: Da Vinci heart surgery**  
(minimally invasive)

# DARPA Grand Challenge #1: Los Angeles to Las Vegas in 10 Hours or Less, No Humans Allowed

- Vehicle must be completely autonomous; no remote control
- Vehicle must be able to avoid obstacles, including other vehicles.
- First vehicle to reach Las Vegas (~250 miles) in <10 hours wins **\$1M**

# “Bob” & Team Caltech

(organized by Prof. Richard Murray)

**1996 Chevy Tahoe 4X4 (used)**

**Electrically controlled steering, throttle, brakes,  
transmission, ignition**

**8 computers (Linux & Windows)**

**30 Sensors**

**\$500K, > 20,000 person-hours (25-55 undergrads)**

# Inside Bob

## Team Caltech: Race Results

## Results:

- 15 teams deemed “safe”
- Caltech placed 5<sup>th</sup>
- Caltech alums Golem Group placed 4<sup>th</sup>
- No team covered more than 5% of the distance
- Many important lessons
- A ***PR DISASTER*** for DARPA

## DARPA Grand Challenge #2: The Mulligan

### Race Day: 8 October 2005

- 198 teams submitted application video
- 118 teams selected for site visit
- 43 teams selected for qualifying event
- 21 qualified for final race
  - Team Caltech in 19<sup>th</sup> start
  - New Vehicle “Alice”

# Alice Overview

## Team Caltech

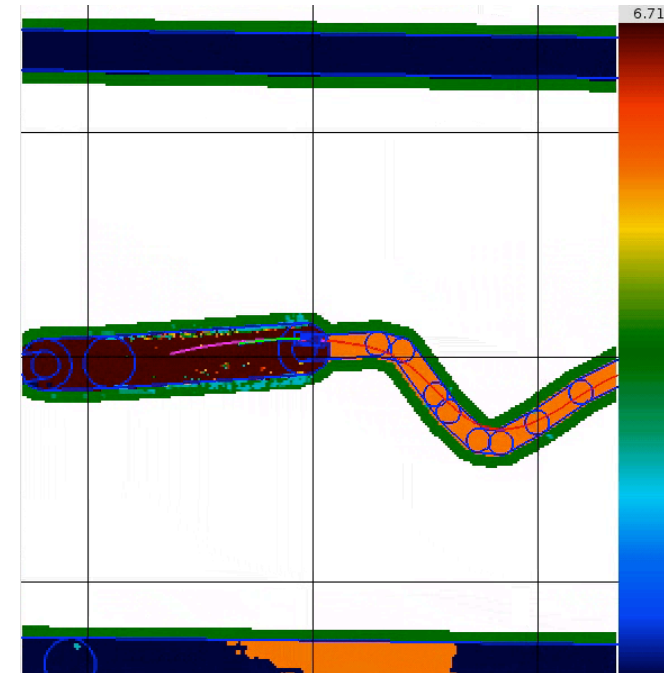

- 50 students worked on Alice over 1 year
- Course credit through CS/EE/ME 75
- Summer team: 20 SURFs + 10 others

## Alice

- 2005 Ford E-350 Van
- Sportsmobile 4x4 offroad package
- 5 cameras: 2 stereo pairs + roadfinding
- 5 LADAR : long, medium\*2, short, bumper
- 2 GPS units + 1 IMU (LN 200)
- 6 Dell 750 PowerEdge Servers
- 1 IBM Quad Core AMD64 (fast!)
- 1 Gb/s switched ethernet

## Software

- 15 programs with ~50 execution threads
- FusionMapper: integrate all sensor data into a speed map for planning
- PlannerModule: optimization-based planning over a 10-20 second horizon

# Alice's Media Debut

# Alice's Media Debut

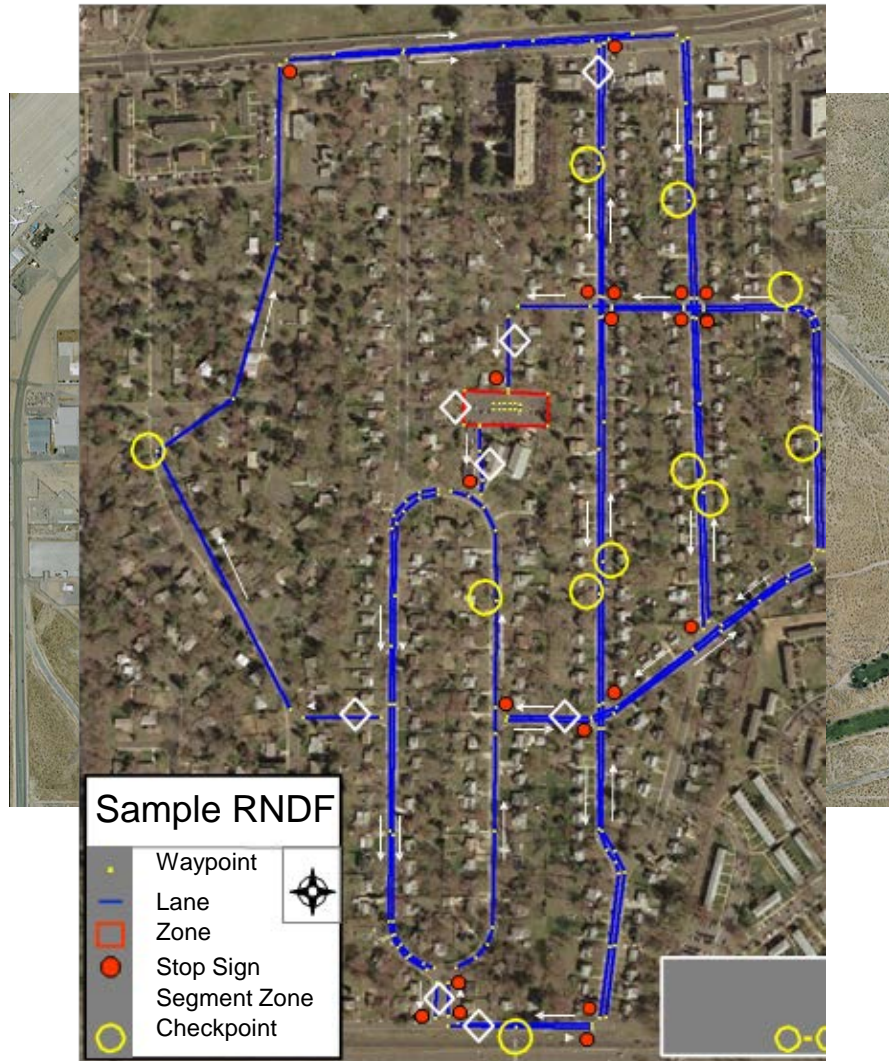

Slashdot | DARPA GC Updates, 8 Oct 05. 2:45 pm SEP

Most interesting one so far is ... Caltech's Alice

## DARPA Grand Challenge #3: The Urban Challenge

### Autonomous Urban Driving

- Mock “city” in old air base
- 60 mile course in < 6 hours
- City streets, intersections
- Obey traffic rules with other robot cars and human operated cars)
- Pull around stopped vehicles
- Navigate in parking lots (with cars)
- U-turns, traffic merges, replanning
- **Prizes: \$2M, \$1M, \$500K**
- 12 Teams given \$1M budget

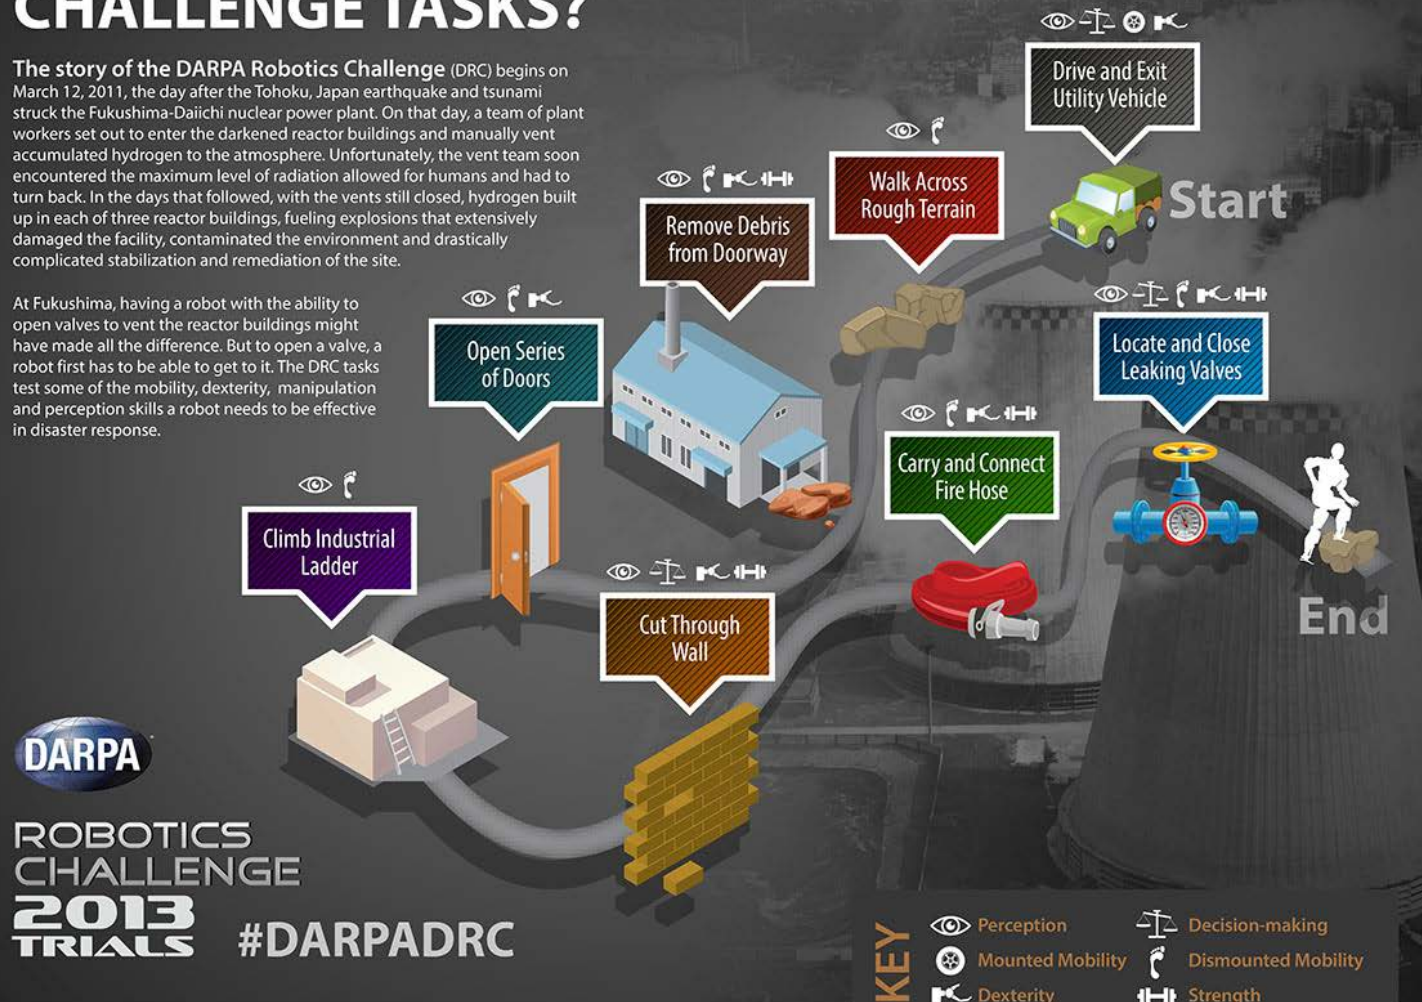

# The DARPA Robotics Challenge (DRC)

([www.theroboticschallenge.org](http://www.theroboticschallenge.org))

## WHY THE DARPA ROBOTICS CHALLENGE TASKS?

The story of the DARPA Robotics Challenge (DRC) begins on March 12, 2011, the day after the Tohoku, Japan earthquake and tsunami struck the Fukushima-Daiichi nuclear power plant. On that day, a team of plant workers set out to enter the darkened reactor buildings and manually vent accumulated hydrogen to the atmosphere. Unfortunately, the vent team soon encountered the maximum level of radiation allowed for humans and had to turn back. In the days that followed, with the vents still closed, hydrogen built up in each of three reactor buildings, fueling explosions that extensively damaged the facility, contaminated the environment and drastically complicated stabilization and remediation of the site.

At Fukushima, having a robot with the ability to open valves to vent the reactor buildings might have made all the difference. But to open a valve, a robot first has to be able to get to it. The DRC tests some of the mobility, dexterity, manipulation and perception skills a robot needs to be effective in disaster response.

# Brief review of DARPA Subterranean Challenge

# 3 environments

# Final event

# Scoring/metrics

- **Positive**

- Complete the mission
- Map the environment (10cm resolution)
- Geo-locate objects (1m error in 1Km)
- Network latency (1s per 500m path length)
- Endurance (4 hours is ideal)

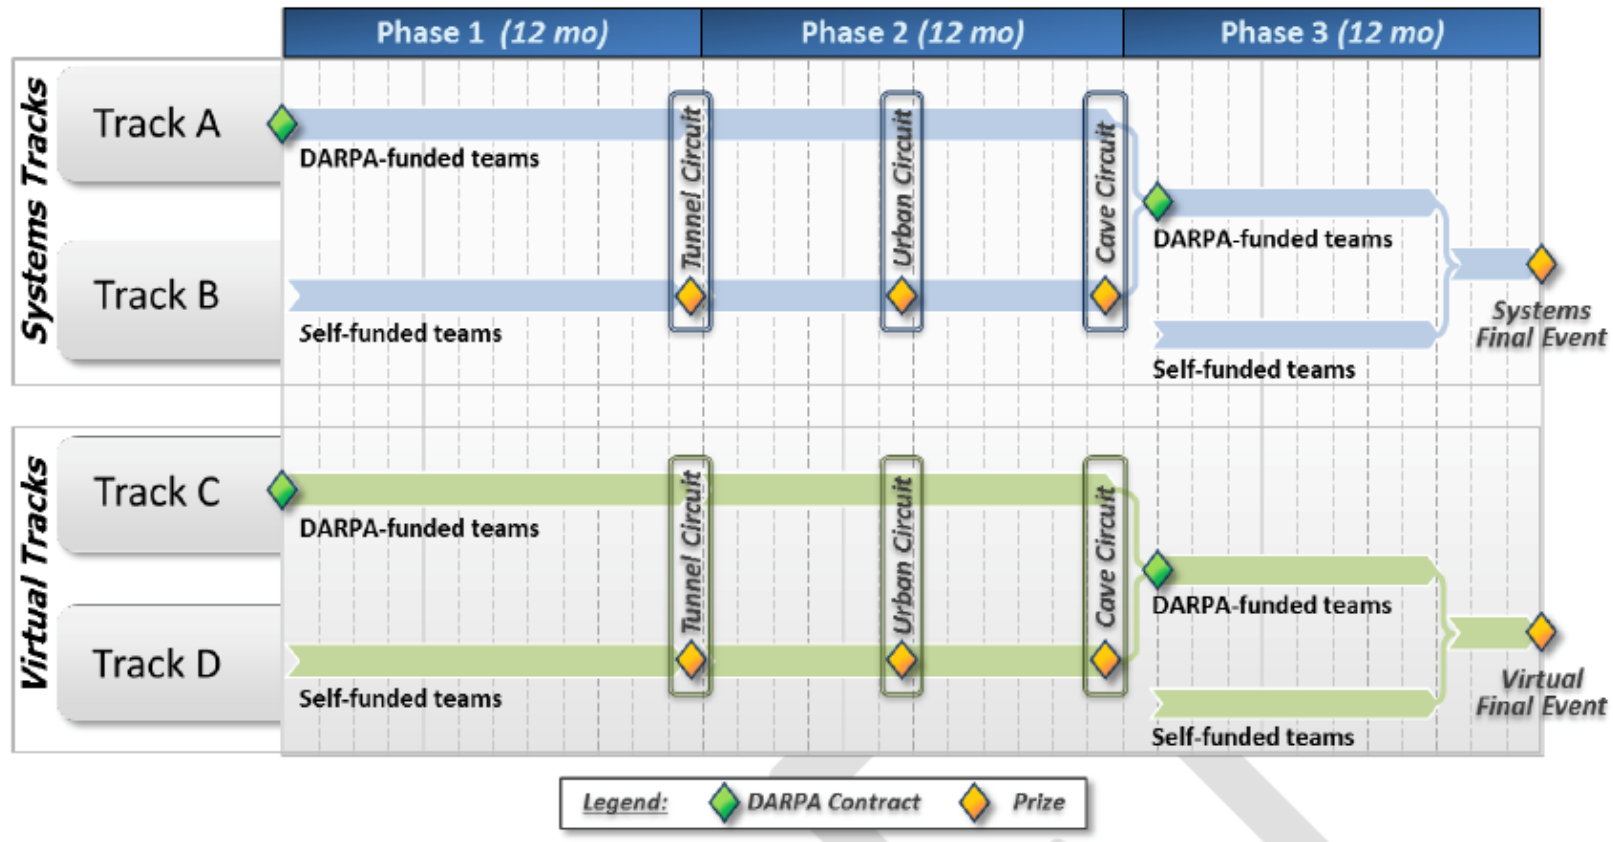

- **Negative**

- Human intervention

# Rules/details

- Entrance/exit is known
- No humans can enter the tunnel
- One human operator. But, with very high penalty
- No manipulation is required
- The length of tunnel, size of obstacles will be announced ahead of the competition.
- Narrow passages: different sizes – minimum human crawlable
  - Hvac vents
  - Storm drain

# Interest in CS/EE/ME75 ?

**CS/EE/ME 75 abc. Multidisciplinary Systems Engineering.** *3 units (2-0-1), 6 units (2-0-4), or 9 units (2-0-7) first term; 6 units (2-3-1), 9 units (2-6-1), or 12 units (2-9-1) second and third terms; units according to project selected.* This course presents the fundamentals of modern multidisciplinary systems engineering in the context of a substantial design project. Students from a variety of disciplines will conceive, design, implement, and operate a system involving electrical, information, and mechanical engineering components. Specific tools will be provided for setting project goals and objectives, managing interfaces between component subsystems, working in design teams, and tracking progress against tasks. Students will be expected to apply knowledge from other courses at Caltech in designing and implementing specific subsystems. During the first two terms of the course, students will attend project meetings and learn some basic tools for project design, while taking courses in CS, EE, and ME that are related to the course project. During the third term, the entire team will build, document, and demonstrate the course design project, which will differ from year to year. Freshmen must receive permission from the lead instructor to enroll. Instructor: ***Not offered 2018–19.***

# Interest in CS/EE/ME75 ?

## Tentative Schedule

- 3 hours/week of lecture (MWF 3-4 pm) + labs
- 1 hour/week of lecture (try to be contiguous with one meeting) + team project meetings
